DELTA[®]

30-YEAR WARRANTY FOR THE NEW DELTA[®]-MAXX PLUS

You can depend on DELTA[®].

“The roofing membrane is the weak point of the roof.” This was the challenge for our new mission. The goal: to develop roofing membranes with very high longevity. Our pioneering discovery: the movement of air above the sheeting is a problem, causing premature ageing. Using this knowledge, we have optimised DELTA[®]-MAXX PLUS and tested it in a testing procedure newly used by DÖRKEN. This is offered by an independent test institute and is an established component of the EAD for roofing membranes. The new material composition ensures the functionality and longevity of our new standard for roofing membranes – **for roofs that are here to stay.**

The DELTA[®]-warranty:

- ◆ If, in spite of being laid expertly, a problem occurs with our products within the 30-year warranty period, we are there for you.
- ◆ We not only replace material as required, the product is also installed professionally. Undamaged materials are reused.
- ◆ One call and we take care of it.

Our warranty promise:

At DELTA[®] we guarantee that our roofing membranes fulfil their function for 30 years when installed correctly (resistance against water penetration: W1 class). We back this up with nearly 60 years of experience in the manufacture and testing of high-performance pitched roof membranes.

Discover the new DELTA[®]-MAXX PLUS now!

FURTHER BENEFITS AT A GLANCE:

Tested fall-through protection

DELTA®-MAXX PLUS has tested fall-through protection. This means increased occupational safety – and health protection, of course.

High fire resistance

Euro fire class B makes it considerably harder for flames to spread with DELTA®-MAXX PLUS. This means tangibly higher protection for the building and therefore greater security for its inhabitants.

Up to 30% material savings

Thanks to the double adhesive strips the sheeting is easy to rotate and reuse. This means significantly less material loss in the coving when laying. In addition, there are also enormous savings of time and costs.

Maximum energy savings

The double adhesive strips of DELTA®-MAXX PLUS prevent the penetration of cold air from outside, thereby ensuring optimal wind proofing. This saves valuable energy and heating costs.

DELTA[®]

LONG LIVE THE ROOF.
